AVAILABLE
NOW!

Heat Transfer Printing is a printing method that involves printing ink through stencils that are supported by a printed fabric heat transfer medium. It is often called a screen.

Embroidery is the handicraft of decorating fabric or other materials with needle and thread or yarn. Embroidery may also incorporate other materials such as, pearls, beads, quills, and sequins. Today, embroidery is most often seen on caps, hats, coats, blankets, dress shirts, denim, stockings, and golf shirts. Embroidery is available with a wide variety of thread or yarn color.

Pen printing is a printing method that allows the transfer of an image onto a 3D object. It's a commonly used decoration technique as it can be printed on all kinds of shapes and textures.

Engraving is the practice of incising a design onto a hard, usually flat surface. This method has been used on glass, metal, and wood.

PRINTING SERVICES

Epoxy resins are low molecular weight pre-polymers or high molecular weight polymers which normally contain at least two reactive groups. The epoxy group is also sometimes referred to as a glycidyl or oxirane group.

Deboss is a process whereby heat & pressure is being applied. This method can be used on real / artificial leather products.

Heat presses are often used to apply designs to fabrics. specially designed presses can also be used to imprint designs on mugs, plates, jigsaw puzzles, caps, and other products.

Roll printing gives high quality, long-lasting results for single and multi-color decoration on cylindrical surfaces. Inks are pressed through mesh stencils to produce clear, sharp images that are ideal for logos and text.

Lanyard

Colours:

This image shows a full page of blank, lined paper. It features approximately 20 evenly spaced horizontal grey lines running across the width of the page, providing a guide for handwriting or typing. The background is a clean, solid white color.
